MEMORANDUM FOR THE RECORD

SUBJECT:  Trip Report

1.  This report is for SHARE 60 conference held in San Francisco for the week of February 20th. [          ] and I attended for the    STAT Production Control Branch.

2. [          ] of SPD, gave an excellent presentation on AIM.    STAT The presentation was very well received by those who attended.  This was a large cross-section of many different organizations.  I, being a non-user of AIM, have been using AIM since I returned.

3.  There were several sessions given for 3380 users.  Most of the experiences on change over and hardware problems were minor.  ODP had several representatives in those sessions and some of our problems were surfaced.

4.  I attended several sessions for TSO users.  With the new Fourcee database and VM not being available, these sessions will give me a better understanding how TSO is used.  I have used TSO since returning from the conference and found the sessions very helpful.

5.  I also attended sessions on JES3 Project group and data dictionary sessions.

6.  With the changing environment of the data processing field, it is beneficial for an organization to attend these SHARE conferences. In attending SHARE, a person has the opportunity to talk to other users to hear about their problems and solutions.
